SWATI LUTHRA (054)

INTRODUCTION

Sampling is the process of selecting observations (a sample) to provide an adequate description and inferences of the population.

- Sample

- It is a unit that is selected from population
- Represents the whole population
- Purpose to draw the inference

- Why Sample???

- Sampling Frame

Listing of population from which a sample is chosen

Population (N)

Sample (n)

SAMPLING

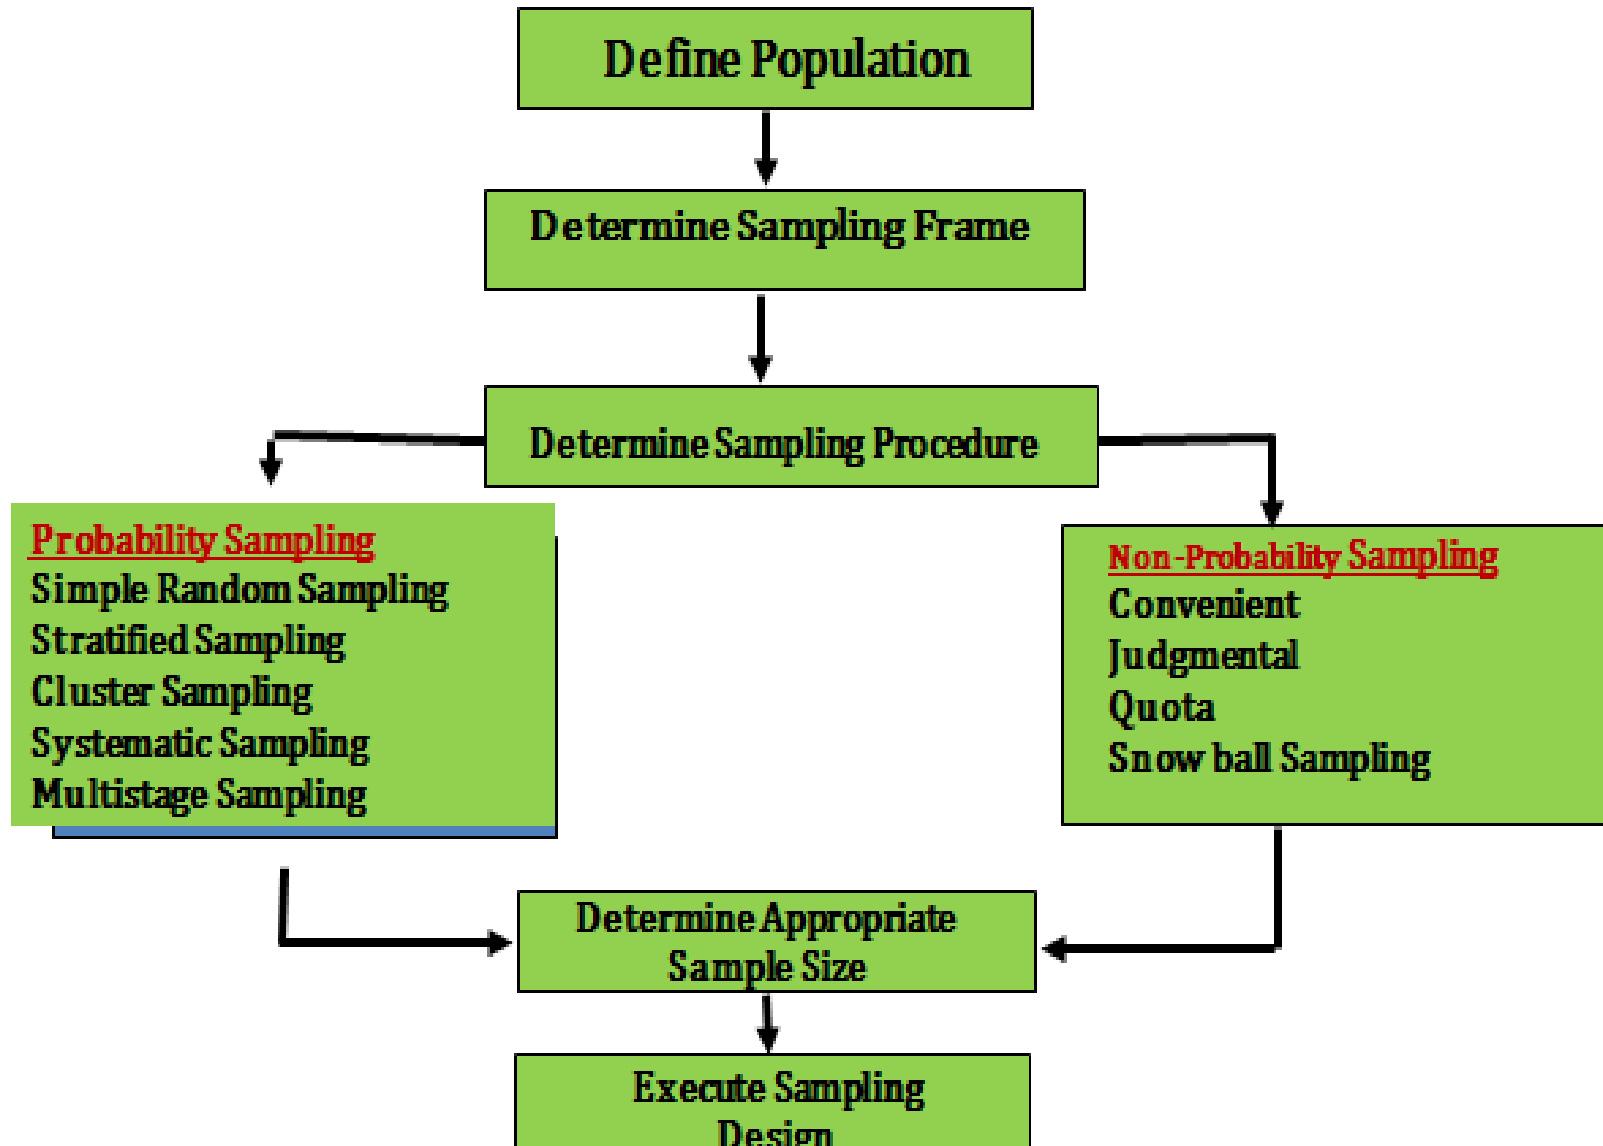

IF THE POPULATION IS HOMOGENEOUS

IF THE POPULATION IS HETEROGENEOUS

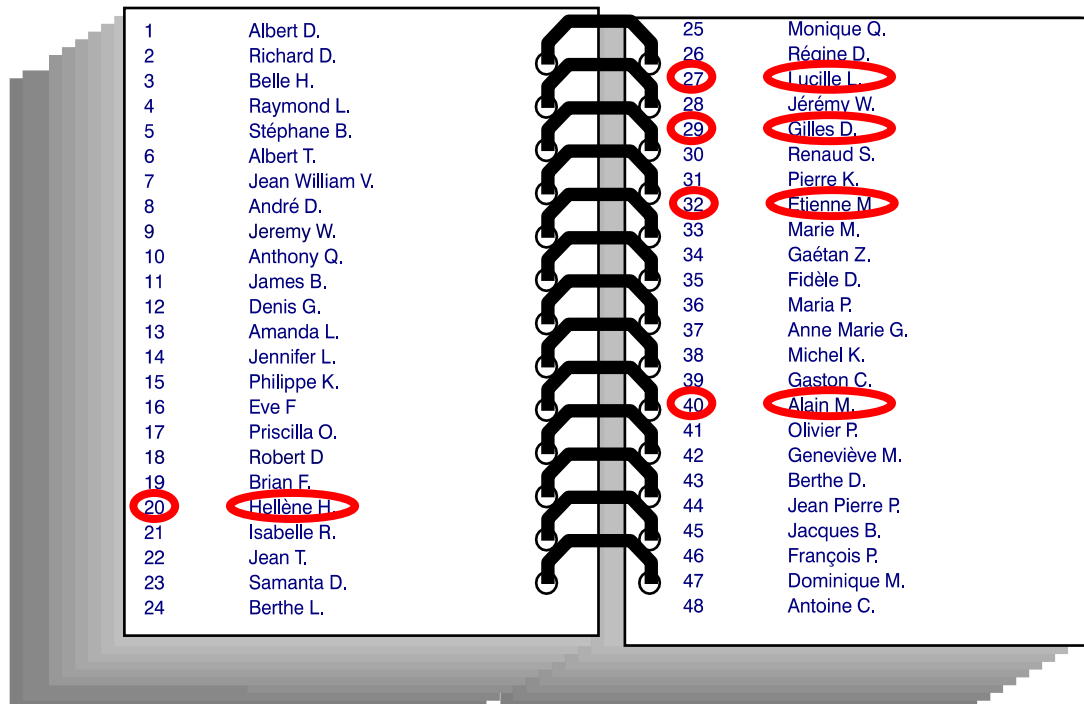

SAMPLING DESIGN PROCESS

PROBABILITY SAMPLING

SIMPLE RANDOM SAMPLING

- All subsets of the frame are given an equal probability.
- Random number generators

SIMPLE RANDOM SAMPLING

Advantages:

- ◉ Minimal knowledge of population needed
- ◉ Easy to analyze data

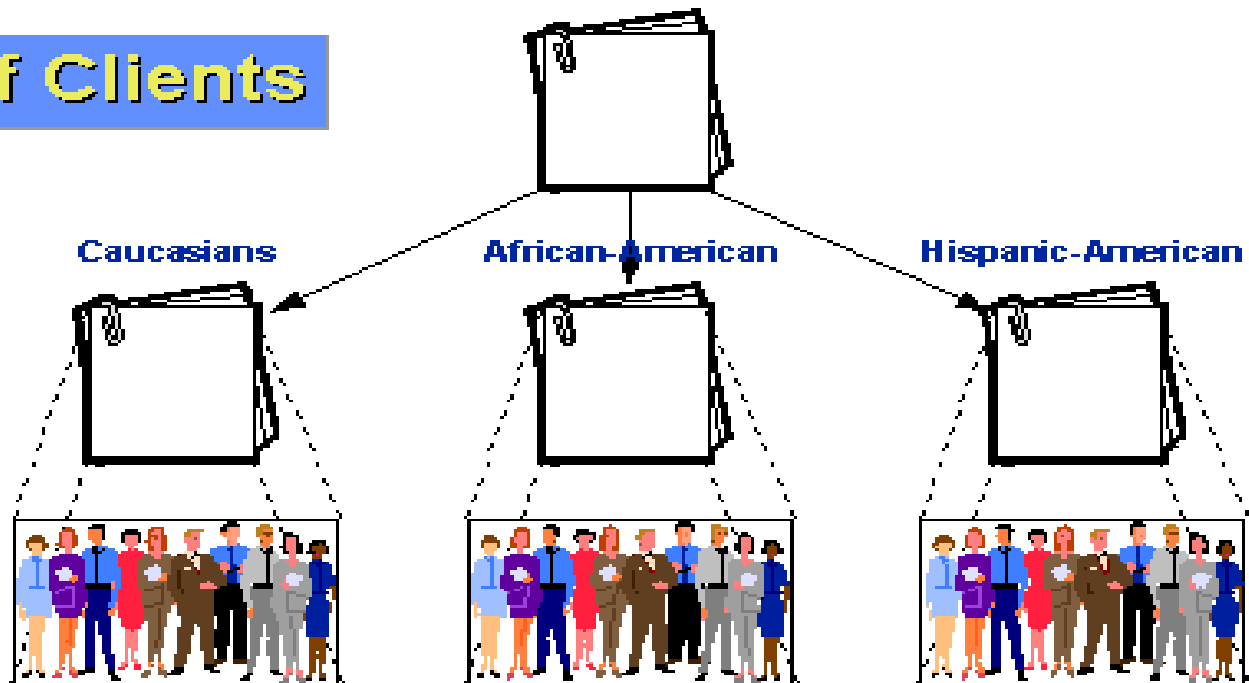

Disadvantages:

- ◉ Low frequency of use
- ◉ Does not use researchers' expertise
- ◉ Larger risk of random error

STRATIFIED RANDOM SAMPLING

- Population is divided into two or more groups called strata
- Subsamples are randomly selected from each strata

List of Clients

Strata

Random Subsamples of n/N

STRATIFIED RANDOM SAMPLING

Advantages:

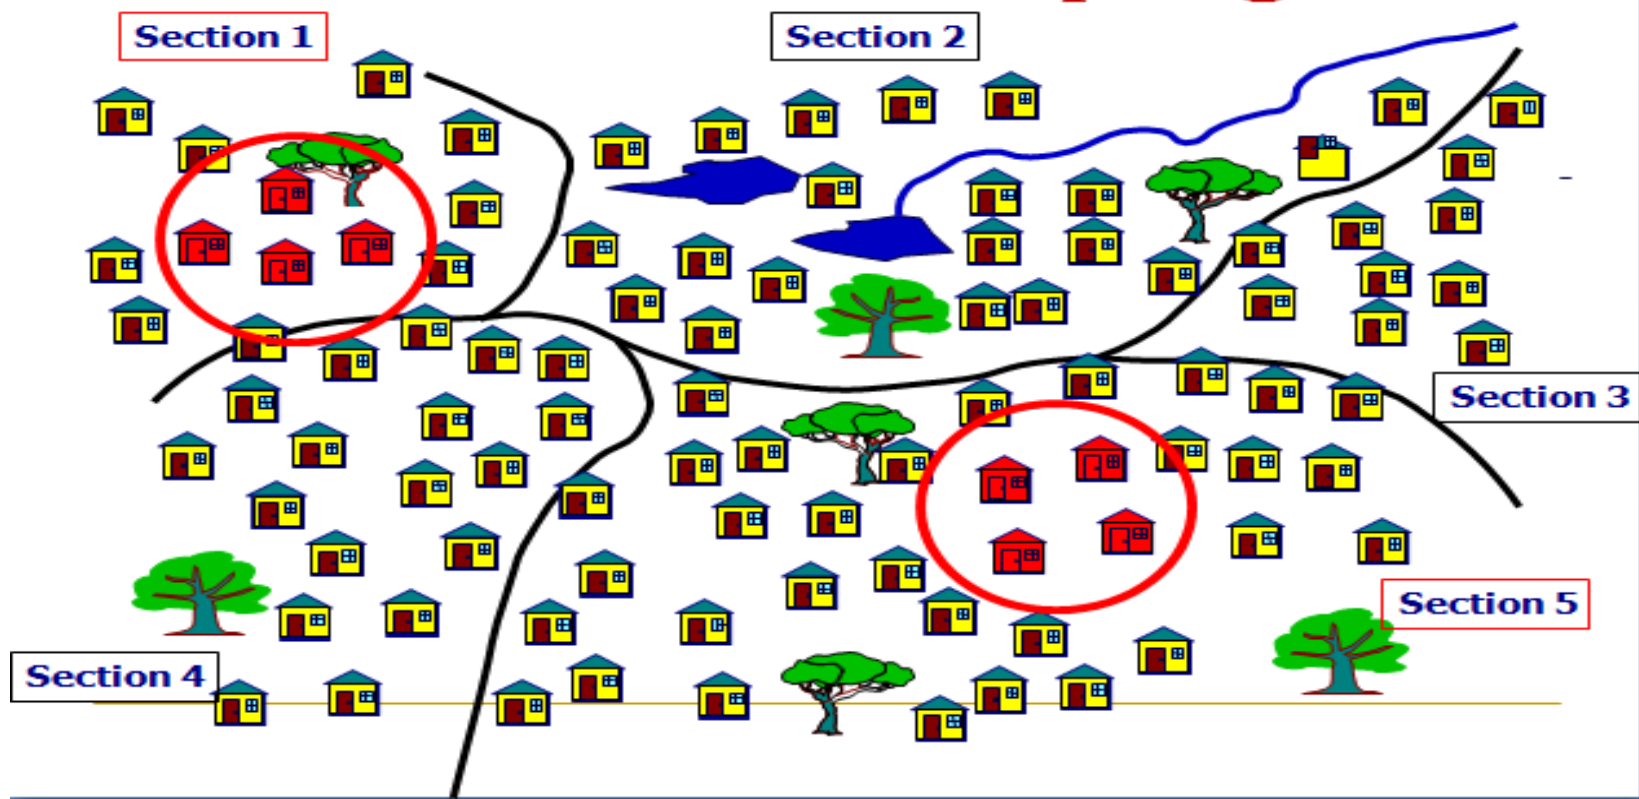

- ⦿ Assures representation of all groups in sample population
- ⦿ Characteristics of each stratum can be estimated and comparisons made

Disadvantages:

- ⦿ Requires accurate information on proportions of each stratum
- ⦿ Stratified lists costly to prepare

CLUSTER SAMPLING

- The population is divided into subgroups (clusters) like families.
- A simple random sample is taken from each cluster

CLUSTER SAMPLING

Advantages:

- ⦿ Can estimate characteristics of both cluster and population

Disadvantages:

- ⦿ The cost to reach an element to sample is very high
- ⦿ Each stage in cluster sampling introduces sampling error—the more stages there are, the more error there tends to be

SYSTEMATIC RANDOM SAMPLING

- ◉ Order all units in the sampling frame
- ◉ Then every n th number on the list is selected
- ◉ N = Sampling Interval

SYSTEMATIC RANDOM SAMPLING

Advantages:

- ⦿ Moderate cost; moderate usage
- ⦿ Simple to draw sample
- ⦿ Easy to verify

Disadvantages:

- ⦿ Periodic ordering required

Secondary

- ## Secondary

MULTISTAGE SAMPLING

Advantages:

- ⦿ More Accurate
- ⦿ More Effective

Disadvantages:

- ⦿ Costly
- ⦿ Each stage in sampling introduces sampling error—the more stages there are, the more error there tends to be

NONPROBABILITY SAMPLES

NONPROBABILITY SAMPLES

- ◉ The probability of each case being selected from the total population is not known.
- ◉ Units of the sample are chosen on the basis of personal judgment or convenience.
- ◉ There are NO statistical techniques for measuring random sampling error in a non-probability sample.

NONPROBABILITY SAMPLES

- ⦿ A. Convenience Sampling
- ⦿ B. Quota Sampling
- ⦿ C. Judgmental Sampling (Purposive Sampling)
- ⦿ D. Snowball sampling
- ⦿ E. Self-selection sampling

A. CONVENIENCE SAMPLING

- ⦿ Convenience sampling involves choosing respondents at the convenience of the researcher.

Advantages

- ⦿ Very low cost
- ⦿ Extensively used/understood

Disadvantages

- ⦿ Variability and bias cannot be measured or controlled
- ⦿ Projecting data beyond sample not justified
- ⦿ Restriction of Generalization.

B. QUOTA SAMPLING

- ◉ The population is first segmented into mutually exclusive sub-groups, just as in stratified sampling.

Advantages

- ◉ Used when research budget is limited
- ◉ Very extensively used/understood
- ◉ No need for list of population elements

Disadvantages

- ◉ Variability and bias cannot be measured/controlled
- ◉ Time Consuming
- ◉ Projecting data beyond sample not justified

C. JUDGEMENTAL SAMPLING

- ⊙ Researcher employs his or her own "expert" judgment about.

Advantages

- ⊙ There is a assurance of Quality response
- ⊙ Meet the specific objective.

Disadvantages

- ⊙ Bias selection of sample may occur
- ⊙ Time consuming process.

D. SNOWBALL SAMPLING

- ◉ The research starts with a key person and introduce the next one to become a chain

Advantages

- ◉ Low cost
- ◉ Useful in specific circumstances & for locating rare populations

Disadvantages

- ◉ Not independent
- ◉ Projecting data beyond sample not justified

E. SELF-SELECTION SAMPLING

- ◉ It occurs when you allow each case usually individuals, to identify their desire to take part in the research.

Advantages

- ◉ More accurate
- ◉ Useful in specific circumstances to serve the purpose.

Disadvantages

- ◉ More costly due to Advertizing
- ◉ Mass are left

SAMPLING ERRORS

SAMPLING ERRORS

- ◉ The errors which arise due to the use of sampling surveys are known as the sampling errors.

Two types of sampling errors

- ◉ **Biased Errors-** Due to selection of sampling techniques; size of the sample.
- ◉ **Unbiased Errors / Random sampling errors-** Differences between the members of the population included or not included.

METHODS OF REDUCING SAMPLING ERRORS

- ◉ Specific problem selection.
- ◉ Systematic documentation of related research.
- ◉ Effective enumeration.
- ◉ Effective pre testing.
- ◉ Controlling methodological bias.
- ◉ Selection of appropriate sampling techniques.

NON-SAMPLING ERRORS

- ⊙ Non-sampling errors refers to biases and mistakes in selection of sample.

- ⊙ **CAUSES FOR NON-SAMPLING ERRORS**

- Sampling operations
- Inadequate of response
- Misunderstanding the concept
- Lack of knowledge
- Concealment of the truth.
- Loaded questions
- Processing errors
- Sample size

THANK YOU ONE AND ALL
