

C# String Trim()

The C# Trim() method is used to remove all leading and trailing white-space characters from the current String object.

Signature

```
public string Trim()  
public string Trim(params Char[])
```

Parameter

First method does not take any parameter. Second method takes a char array as parameter.

Return

It returns a string.

C# String Trim() Method Example

```
using System;  
  
public class StringExample  
{  
    public static void Main(string[] args)  
    {  
        string s1 = "Hello C#";  
        string s2 = s1.Trim();  
        Console.WriteLine(s2);  
    }  
}
```

Output:

```
Hello C#
```
