

C# String SubString()

The C# SubString() method is used to get a substring from a String. The substring starts at a specified character position and continues to the end of the string.

Signature

```
public string Substring(Int32 index)
public string Substring(Int32, Int32)
```

Parameter

index: it is an integer type parameter which is used to pass index to get a substring.

Return

It returns a string.

C# String SubString() Method Example

```
using System;

public class StringExample
{
    public static void Main(string[] args)
    {
        string s1 = "Hello C Sharp";
        string s2 = s1.Substring(5);
        Console.WriteLine(s2);
    }
}
```

Output:

```
C Sharp
```
