

Department of Computer Science & IT
The Islamia University of Bahawalpur

MCS –3rd (Morning)
Final term – 19 Jan. 2017
Instructor: Dr. Nadeem Akhtar

Subject: Theory of Automata and Formal Languages (CSIT-21304)
Time: 1 hr. 50 min.
(Marks: 50)

Q1. Short questions	<div>a) Formally define a Context-Free Grammar. Give an example.</div> <div>b) Differentiate between Regular Language and Context-Free Language. Give one example of each.</div> <div>c) Write CFG for the language: $\{0^n@1^n \mid n \geq 0\} \cup \{1^n@0^n \mid n \geq 0\}$</div> <div>d) Consider the following Context-Free Grammar $\begin{aligned} \langle \text{EXPR} \rangle &\rightarrow \langle \text{EXPR} \rangle + \langle \text{TERM} \rangle \mid \langle \text{TERM} \rangle \\ \langle \text{TERM} \rangle &\rightarrow \langle \text{TERM} \rangle \times \langle \text{FACTOR} \rangle \mid \langle \text{FACTOR} \rangle \\ \langle \text{FACTOR} \rangle &\rightarrow (\langle \text{EXPR} \rangle) \mid a \end{aligned}$<p>Formally describe the above grammar. Using the above grammar construct parse trees of the following expression:</p>$a \times a + (a + a + a)$<p style="text-align: right;">(5 + 5 + 5 + 5 = 20)</p></div>
Q2. Describe the languages denoted by the following Regular expressions: (Note: The alphabet $\Sigma = \{0, 1\}$)	<div>a) $000(\Sigma\Sigma)^*0$</div> <div>b) $1^*(01^+)^*$</div> <div>c) $1(\Sigma\Sigma\Sigma)^+0$</div> <div>d) $0\Sigma^*0 \cup 1\Sigma^*1 \cup 0 \cup 1$</div> <p style="text-align: right;">(2.5 + 2.5 + 2.5 + 2.5 = 10)</p>
Q3. Consider the language:	$\{1^n0^n \mid n \geq 0\}$ <div>a) Construct a Push-Down Automata that recognizes the above language.</div> <div>b) Formally describe the constructed Push-Down Automata.</div> <p style="text-align: right;">(5 + 5 = 10)</p>
Q4.	<div>a) Define a Turing Machine. Define Turing-Recognizable and Turing-Decidable languages.</div> <div>b) Consider $\Gamma = \{a, b, c\}$, $\Gamma^* = \{u, v\}$ and states are q_i, q_j and q_k Write the transition functions that handles the following Turing Machine configurations:<div><div>i. $ua \ q_i \ bv$ yields $u \ q_j \ acv$</div><div>ii. $ub \ q_i \ av$ yields $ubc \ q_j \ v$</div><div>iii. $uc \ q_j \ av$ yields $u \ q_k \ cb \ v$</div></div></div> <p style="text-align: right;">(5 + 5 = 10)</p>
