

EXERCISE # 8**GENERALIZED LIFE CYCLE OF ZYGOMYCOTA**

Zygomycota classification makes up only about 1% of true Fungi. There are only about 900 species. The most familiar is the mold that affects strawberries and other fruits. Zygomycota are commonly thought of as bread molds, but there are many species of fungi within this classification that form symbiotic relationships with plants or infect animal hosts. It is believed that zygomycota have zygotic or haplontic life cycles. Zygomycota are able to reproduce both sexually and asexually (Wikipedia).
